

**THE UNIVERSITY OF HONG KONG
LI KA SHING FACULTY OF MEDICINE**

**Master of Research in Medicine
Programme Learning Outcome**

University's Educational Aims	Learning Outcomes
A. Critical intellectual enquiry and acquiring up-to-date knowledge and research skills in a discipline / profession	PLO1 Contribute to the advancement of biomedical knowledge through professional awareness and good research practice;
	PLO2 Demonstrate the capacity to critically review empirical literatures in biomedical research;
B. Application of knowledge and research skills to practice or theoretical exploration, demonstrating originality and creativity	PLO3 Demonstrate the capacity to plan and undertake research work independently with sound research knowledge and skills;
	PLO4 Understand the importance of life-long learning, the responsibilities and obligations of being a biomedical researcher;
C. Tackling novel situations and ill-defined problems	PLO5 Develop problem-solving skills in biomedical research practice;
D. Collaboration and communication of disciplinary knowledge to specialists and the general public	PLO6 Disseminate updated knowledge and communicate effectively to fellow researchers and the lay public regarding their field of research;
E. Awareness of and adherence to personal and professional ethics	PLO7 Demonstrate professionalism and compassion with strict adherence to professional ethics and integrity;
	PLO8 Reflect on research training. Construct, articulate and evaluate their own philosophy and professional ethics in biomedical research;
F. Enhancement of leadership and advocacy skills in a profession	PLO9 Demonstrate leadership qualities in biomedical research and healthcare profession;
	PL10 Demonstrate an understanding of their research process and the capability to formulate and express their own opinion on their chosen field of research.
